I think, almost surely.

Wonder if that is a homeland security thing?

It looks like the 3D view of Harrington GS is purposely obscured. Structures very close to the GS are in 3D. I wonder if this is now standard practice?

Generating Station 3D view from structures on the plant property

I was talking with Bob and remembered that I do have a draft protocol that TCEQ shared in late February for their contractor modeling. I can share that but that is the only thing that we have to share.

Erik will you get back with Joshua and tell him we don't have anything.

During the calls it sounded like Xcel had done some modeling but hadn't shared it out with anyone.

This is a good reminder for TCEQ and XCEL that we need them to get that AO done this fall.

I have not received anything. I can check with Texas. I didn't know if you had heard anything as I was not in the talks with Xcel last month.

Subject: Xcel-SPS Harrington Station Data

Guy and Erik,

I hope you're staying healthy, safe, and sane.

We're trying to track down some information about SO2 emissions and modeling out at SPS-Xcel's Harrington Station in west Texas, and I figured it wouldn't hurt to ask you.

Specifically, we're looking for:

1. Any recent modeling reports and underlying modeling files for compliance with the SO2 NAAQS. We're hoping that this might include stack base elevation, stack height, stack exit diameter, stack flow rate at different loads (100% and 50%), stack exit temperature at different loads (100% and 50%), building and structure dimensions, and the fenced boundary location.

and/or

2. The following data for 2017-2019: Hourly stack flow rate; Hourly stack temperature; and Hourly SO2 emissions.

Do you happen to have access to this information, or could you point me in the direction of someone who might?

Thank you!

Josh
